Berlin airport flight information

The mere mention of Berlin's airports brings a groan from the locals. The truth is that the city is extremely under-served by the two current airports and attempts to provide a new modern airport have failed spectacularly. That said, there are two airports for Berlin that respond to national and international travel. Frankfurt Airport is the busiest in Germany, but these two smaller airports do a service for the more than 30 million visitors who come to Berlin each year. In addition, there is a new airport opening in a day, and an old airport worth a visit. Learn how to navigate Berlin's airports, what services they offer and get to the city best. Berlin Tegel Airport (Flughafen Berlin-Tegel - TXL) is Berlin's main international airport. Located in the former West Berlin of Tegel, it is about 8 miles northwest of the city centre. Opened in 1948 and once known as Otto Lilienthal Airport, it is the hub for most major airlines in Berlin and flies to European and international destinations. It is quite small and often crowded, arranged in a hexagonal design with shooting terminals on the main section in an effort to manage its overflowing passenger volume. The benefit of its small size is that it is quite easy to navigate and walking is minimal. Transfer within the airport is easy and can be done quickly, but you should budget at least 45 minutes to transfer if you do not need to go through security again. Once you've entered your gate, it's usually just steps away from the plane (although buses are increasingly used to your final distance to your plane). Use the airport map to plan your trip. Tegel Airport is open daily from 04.m:00 to midnight. If a flight lands outside these hours, the airport remains open. Already far exceeding its capacity in 2012, it has been set to be closed several times, but continues to operate - much to the dismay of residents living in the current flight path as in Pankow. Vote after the vote, the airport that collapses has been supported in endless oblivion. Tegel offers all the basics of shops, restaurants and a tour desk, but don't expect a lot of options. Especially as the terminals are a bit widespread and if you are in C or D, it is unlikely to return and explore A and B. There are money changers, ATMs and vending machines BVG tickets (public transport). For a city with excellent public transport, the options to and from the airport are surprisingly limited. The only option is by bus. An AB ticket for €2.80 can be used for up to 2 hours in one direction to navigate through the comprehensive public network of U-Bahn, S-Bahn, trains, trams and even ferries from Berlin. Tickets can be purchased from cars outside the main terminal, on buses, or from BVG distributors. The Jet Express (TXL and X9) lines run every 10-15 minutes and take 45 minutes to reach Alexanderplatz, with easy connections to top sites in Berlin, such as Brandenburger Tor and Hauptbahnhof, as well as the rest of Germany. There are a few other bus lines, it would be 128 and 109, which also leave right outside the airport and take you to different points in the city. If you prefer private transport, there are taxi rides in the inner ring of Terminal A at Gates 6-9 and outside Terminal C and E. Standard rates apply to all taxi drivers in Berlin: the basic fare is €3.90, each of the first seven kilometres costs €2.00, and each next kilometre is €1.50. There is also a cost of €1.50 per person, €1 for bulky luggage, €1.50 for non-cash payments and €0.50 for a single trip from Berlin Tegel Airport. A typical taxi fare from Tegel airport to the city centre is €30. Another option is to rent a car. All major rental companies are present at the airport, on the lower floor, next to Terminal E and parking P2. The other major airport for Berlin is Schönefeld Airport (Flughafen Schönefeld - SXF). It is similarly outdated (opened in 1946) and maxed out, but it is also the reasons for the new airport planned and received some necessary updates. It is located 18 miles southeast of Berlin, near the town of Schönefeld, on the southern border of Berlin, in the former East Berlin. There are four terminals spread in the airport because it is not as compact as Tegel. See the Terminal map to orient yourself. Recently, more information has been added in English and direction lines to make navigation easier. Schönefeld is open 24 hours a day, but only people with valid travel documents can stay between 10 p.m and 6 a.m. Schönefeld offers basic shops, restaurants, and a tour desk, but there are limited options. There are money changers, ATMs and BVG ticket machines (public transport). There are also a number of services for people flying with children, limited mobility, etc. Unlike Tegel, where buses deliver you to the airport door, there is a walk from the S-Bahn and regional trains to the airport. Budget a few minutes for the long walk and watch out for late flyers running at the entrance. That said, the train is the easiest and cheapest way to travel to and from Schönefeld Airport. There are several lines connecting the airport to the city centre (such as the S9 or S45) and depart every 20 minutes for the 40-minute journey. There are also regional RE7 or RB14 trains (marked as Airport Express) that make the journey with the fewest stops. They run 4 a.m. at 11 p.m. and take about 20 minutes to reach Alexanderplatz, 30 minutes at Hauptbahnhof, and 35 minutes at Zoologischer Garten. Schönefeld is located outside Zone B (the largest journey in is in the AB area, including Tegel airport), so you will need an ABC ticket for €3.40. Buy this from the cars below the platforms and validate it on the platform before boarding the train. Another option is to travel by taxi. There are taxi lines waiting outside the main terminal and cost around €40 and take Thirty-five minutes. If you prefer to drive, at Schönefeld you can choose a number of large car rental companies. The car rental centre is located right in front of the main terminal A. The return area is located in the multi-storey Parking Lot P4. The situation with the new Berlin-Brandenburg International (Flughafen Berlin Brandenburg Willy Brandt - BER) Airport is complicated. Set to open in 2011 and close the two existing airports, plans to use this site were suddenly abandoned when reporters were invited to see it for a big reveal and obviously it wasn't ready. This embarrassment of German efficiency has continued for years, still costing Berlin millions of dollars in security and maintenance at an unusable airport. Its opening date has been postponed several times and the expected opening is now autumn 2020. Unfortunately, the airport would already have been too small to manage the city's traffic if it had opened on time, so it remains to be seen what will happen to this airport, as well as to the two older airports. However, BER uses some of Schönefeld's existing infrastructure, and these much-needed updates have enabled the services of this airport to be expanded. However, another berlin airport is no longer in use, but it is still an integral part of the city's rich history. Tempelhof Airport, located between the Neukölln and Tempelhof districts, dates back to the 19th century and was one of Berlin's first airports, as well as the historic site of Berlin air transport. Operations ended in 2008, but as it became a listed building in 1995, there was a question of what to do with it. After much debate, a public vote was held and it was decided to open the massive land as a public park. Today, bikers, skaters, runners and more can make their way onto the track with its hangers and other buildings that host various businesses, festivals and are even used as a space for refugees. Thank you for letting us know! Photo: Bruce Bennett (Getty Images)When you book a flight through travel booking sites, it would be Vayama or Google Flights, you hope you get the best deal, but here's the catch: Many low-cost airlines prevent their flights from appearing on some of these third-party travel sites. Are you currently being jabbed into midriff by the elbows of duel inguding strangers? You must be... Read more Jetblue Flights, for example, will not appear on booking sites, would be Vayama or SmartFare.com. Meanwhile, southwest flights generally won't appear on any third-party travel site, which means you might be losing out on a cheaper option or just a destination that you'd prefer to go if they were an available option. If you want a chance to view all local departures, try using - a website that compiles direct flights from all over the world. By selecting an airport, you can check every departure flight that departs from there on a given day (and up to nine months from now); is especially useful when booking from obscure destinations that rely on airlines, as recommended in this week's Recomendo newsletter. Using FlightsFrom.com to find tickets from Hagfors, Sweden, for example, two results appear by a regional airline departing on July 1; Meanwhile, a search via Google Flights for the same date comes empty. Screenshot: FlightsFrom.comPart of its appeal is that it only makes trips easier to plan; See the departure times of each non-stop flight in a list and no sponsored ads. If you want to leave at a specific time of day and you don't have a destination in mind, FlightsFrom.com is also a useful tool because it organizes the entire list based on departure times. On the other hand, for as useful as it is, FlightsFrom.com does not take into account pricing rates. So be sure to compare the results with those you find on other sites. (Skyscanner is another good resource, although they have ads.) Screenshot: FlightsFrom.comFor more from Lifehacker, make sure you follow us on Instagram @lifehackerdotcom. @lifehackerdotcom.
